

## ABSTRACT

An individual examination execution device is provided with a question storage means (14) in which exam questions are stored, a sequence data holding means (12) that holds sequence data as a basis of exam question reproduction sequence, a sequence instruction means (13) for reading the exam questions stored in the question storage means (14), and a reproduction means (15) for reproducing the exam questions stored in the question storage means (14) into audio. The sequence instruction means (13) reads the exam questions stored in the question storage means (14) with reference to the sequence data stored in the sequence data holding means (12), and the exam question reproduction sequence is changed according to the seat position.
